- Creating a flow from a template
- Creating a flow from scratch

- Working with triggers
- Working with actions
- Conditional branching
- Loops and iterations

Module-04

Power Automate Administration

- User management in Power Automate
- Working with environments
- Data loss prevention policies
- Analyzing flow usage and performance
- Power Automate governance and security

Module-05

Power Automate Integration

- Integrating with SharePoint
- Integrating with Dynamics 365
- Integrating with Power Apps
- Integrating with Teams
- Integrating with Outlook

Module-06

Power Automate Advanced Concepts

- Using expressions in Power Automate
- Using variables and arrays
- Creating and using custom connectors
- Using parallel branches
- Error handling and retries
- Using scopes

Module-07

Power Automate Desktop

- Introduction to Power Automate Desktop
- Creating a desktop flow
- Working with actions and triggers
- Automating web and desktop applications
- UI automation

Module-08

Power Automate with APIs

- Introduction to APIs
- Using APIs in Power Automate
- Creating custom APIs
- Working with JSON and XML data
- Authentication and authorization

Module-09

Power Automate with Azure

- Introduction to Azure services
- Integrating Power Automate with Azure services
- Creating Azure Functions
- Creating Logic Apps
- Creating Power Automate flows with Azure

Module-10

Power Automate with Power BI

- Introduction to Power BI
- Integrating Power Automate with Power BI

- Creating Power Automate flows for Power BI
- Automating data refresh C
- reating alerts and notifications

Module-11

Power Automate with AI Builder

- Introduction to AI Builder
- Integrating Power Automate with AI Builder
- Using AI Builder models in Power Automate
- Creating custom AI Builder models
- Automating business processes with AI

Module-12

Power Automate with Microsoft Dataverse

- Introduction to Microsoft Dataverse
- Integrating Power Automate with Dataverse
- Creating Power Automate flows for Dataverse
- Creating custom entities and fields
- Automating business processes with Dataverse
